WHAT IS CJC-1295 + IPA?

CJC-1295 is a growth hormone releasing hormone (GHRH) analog that stimulates the pituitary gland to release growth hormone (GH). IPA (Ipamorelin) is a ghrelin mimetic that enhances GH release while helping to reduce cortisol and prolactin response.

CURRENT RESEARCH AREAS

CJC-1295 + IPA is being investigated for its potential role in growth hormone optimization, lean muscle support, recovery, fat metabolism, bone density, skin health, and overall wellness. Research is ongoing in both healthy individuals and clinical populations.

RESEARCH HIGHLIGHT

Studies suggest that combining CJC-1295 with IPA may enhance the amplitude and duration of growth hormone release compared to either compound alone. This combination may support improved recovery, body composition, and tissue repair in research settings.

PREMIUM RESEARCH QUALITY

Sourced with high standards for research-grade purity and consistency.

ADVANCED RESEARCH COMPOUND

Investigational peptide intended for laboratory research purposes only.

BACKED BY SCIENCE

Supported by peer-reviewed research and ongoing scientific investigation.
